Donald Norman is who coined the term **User Experience** in the 90's. He wrote classics like *The Design of Everyday Things*, *The Design of Future Things* and *Emotional Design: why we love (or hate) every day things*. At the time, he was working as Vice President on the Product Design team at Apple. During an interview he mentioned, "I invented the term because I thought human interface and usability were too narrow. I wanted to cover all aspects of the person's experience with the system including industrial design, graphics, the interference, the physical interaction, and the manual." -Norman

3

LAYOUT

Present content in a way that guides readers through in a logical hierarchy.

Aligning the elements in a layout with each other will help maintain consistency.

4

CALLOUTS

Use callouts sparingly to highlight only key information.

5

SPACE

Keep significant negative space. When too much information is in a layout, messaging becomes cluttered and incoherent.

9

PROPORTION

The eye can be deceiving; make sure items are appropriately sized in data visualizations so as not to skew data.

10

SIMPLICITY

Avoid unnecessary design, including 3D charts, ornamental illustration or extraneous elements.
